## PRODUCT CATALOGUE

**Formül** produces **PP-R pipes and fittings, PVC pipes and fittings and PE-RT pipes**, as well as **metal inserts** for its PP-R fittings.

In order to meet the needs of the plastic sector **Formül** started its production adventure as a **plastic industry mold producer** in the **early 1990's** when it was founded.

**Formül** has recently made major innovations and breakthroughs, one of the which is to move to its **privately-owned brand-new plant premises**.

Boasting a privileged location in the **Çerkezköy / Tekirdağ** industrial zone, all of the systems and facilities of the new plant premises covering approximately **40,000 sqm** were built in such a modern fashion as to compel **European standards**.

All of the fitting moulds were replaced with the **multispan moulds**.

**Formül** meets-up the metal and insert requirements of its **valves and all metal fittings** with production from its own facility which are manufactured with **fully automatic machines** in **Çerkezköy**. Completing its investments in the field of "Machining" with its modern tools and machines and **shaping metal as well as plastic**, **Formül** is one of the rare companies that **produce its own metal needs**.

**Formül** is now **leading** the field in the **PPRC industry** thanks to its **product range, capacity and excellent and impeccable quality**.

The World's Preference,  
Turkey's Brand

# Quality System Management

Our company, which is located in **İstanbul Turkey** is a major manufacturer and exporter of **PP-R pipes and fittings** for cold and hot water supply systems.

Our company was established in **1990** for the purpose of **mold construction and manufacturing**. In course of time, having several years of experience and expertise, has begun to produce also the **pipes and fittings** in **PP-R** and **PE-X** systems, and the **brass inserts** for the fittings. Step by step, following the developing technology, has reached currently to the **most extensive product range** in the sector.

We ensure our clients **high quality product, project-specific services and solutions** as well as successful organization, approved by the certificates

**ISO 9000, CE, TSE, DVGW, SKZ, TZW, AENOR, AEO, GOST-R, CSTB, Ukr-SEPRO** and other national certificates.

Becoming **leader company** in its field, several projects and works have been successfully completed by **professional staff** in our laboratory and by collaboration of different universities. As a result of this work, our company is among few companies in the sector with **patents, utility models and model certificates**, including giving **know-how** service to the new investors.

Our products have become a popular and requested brand in **Africa, CIS countries, Far and Middle East** within short time. We are proud of exporting our products to more than **80 countries** as a result of **accumulation of experience, using latest technology, environment friendly systems** and meeting the **customer expectations**.

Our highly qualified and well experienced team will be **happy to serve you...**

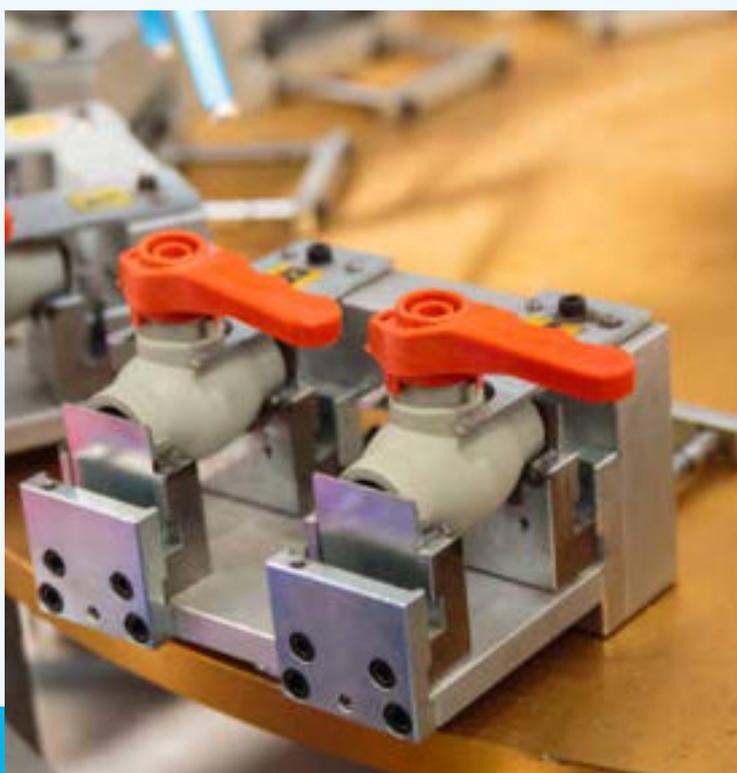

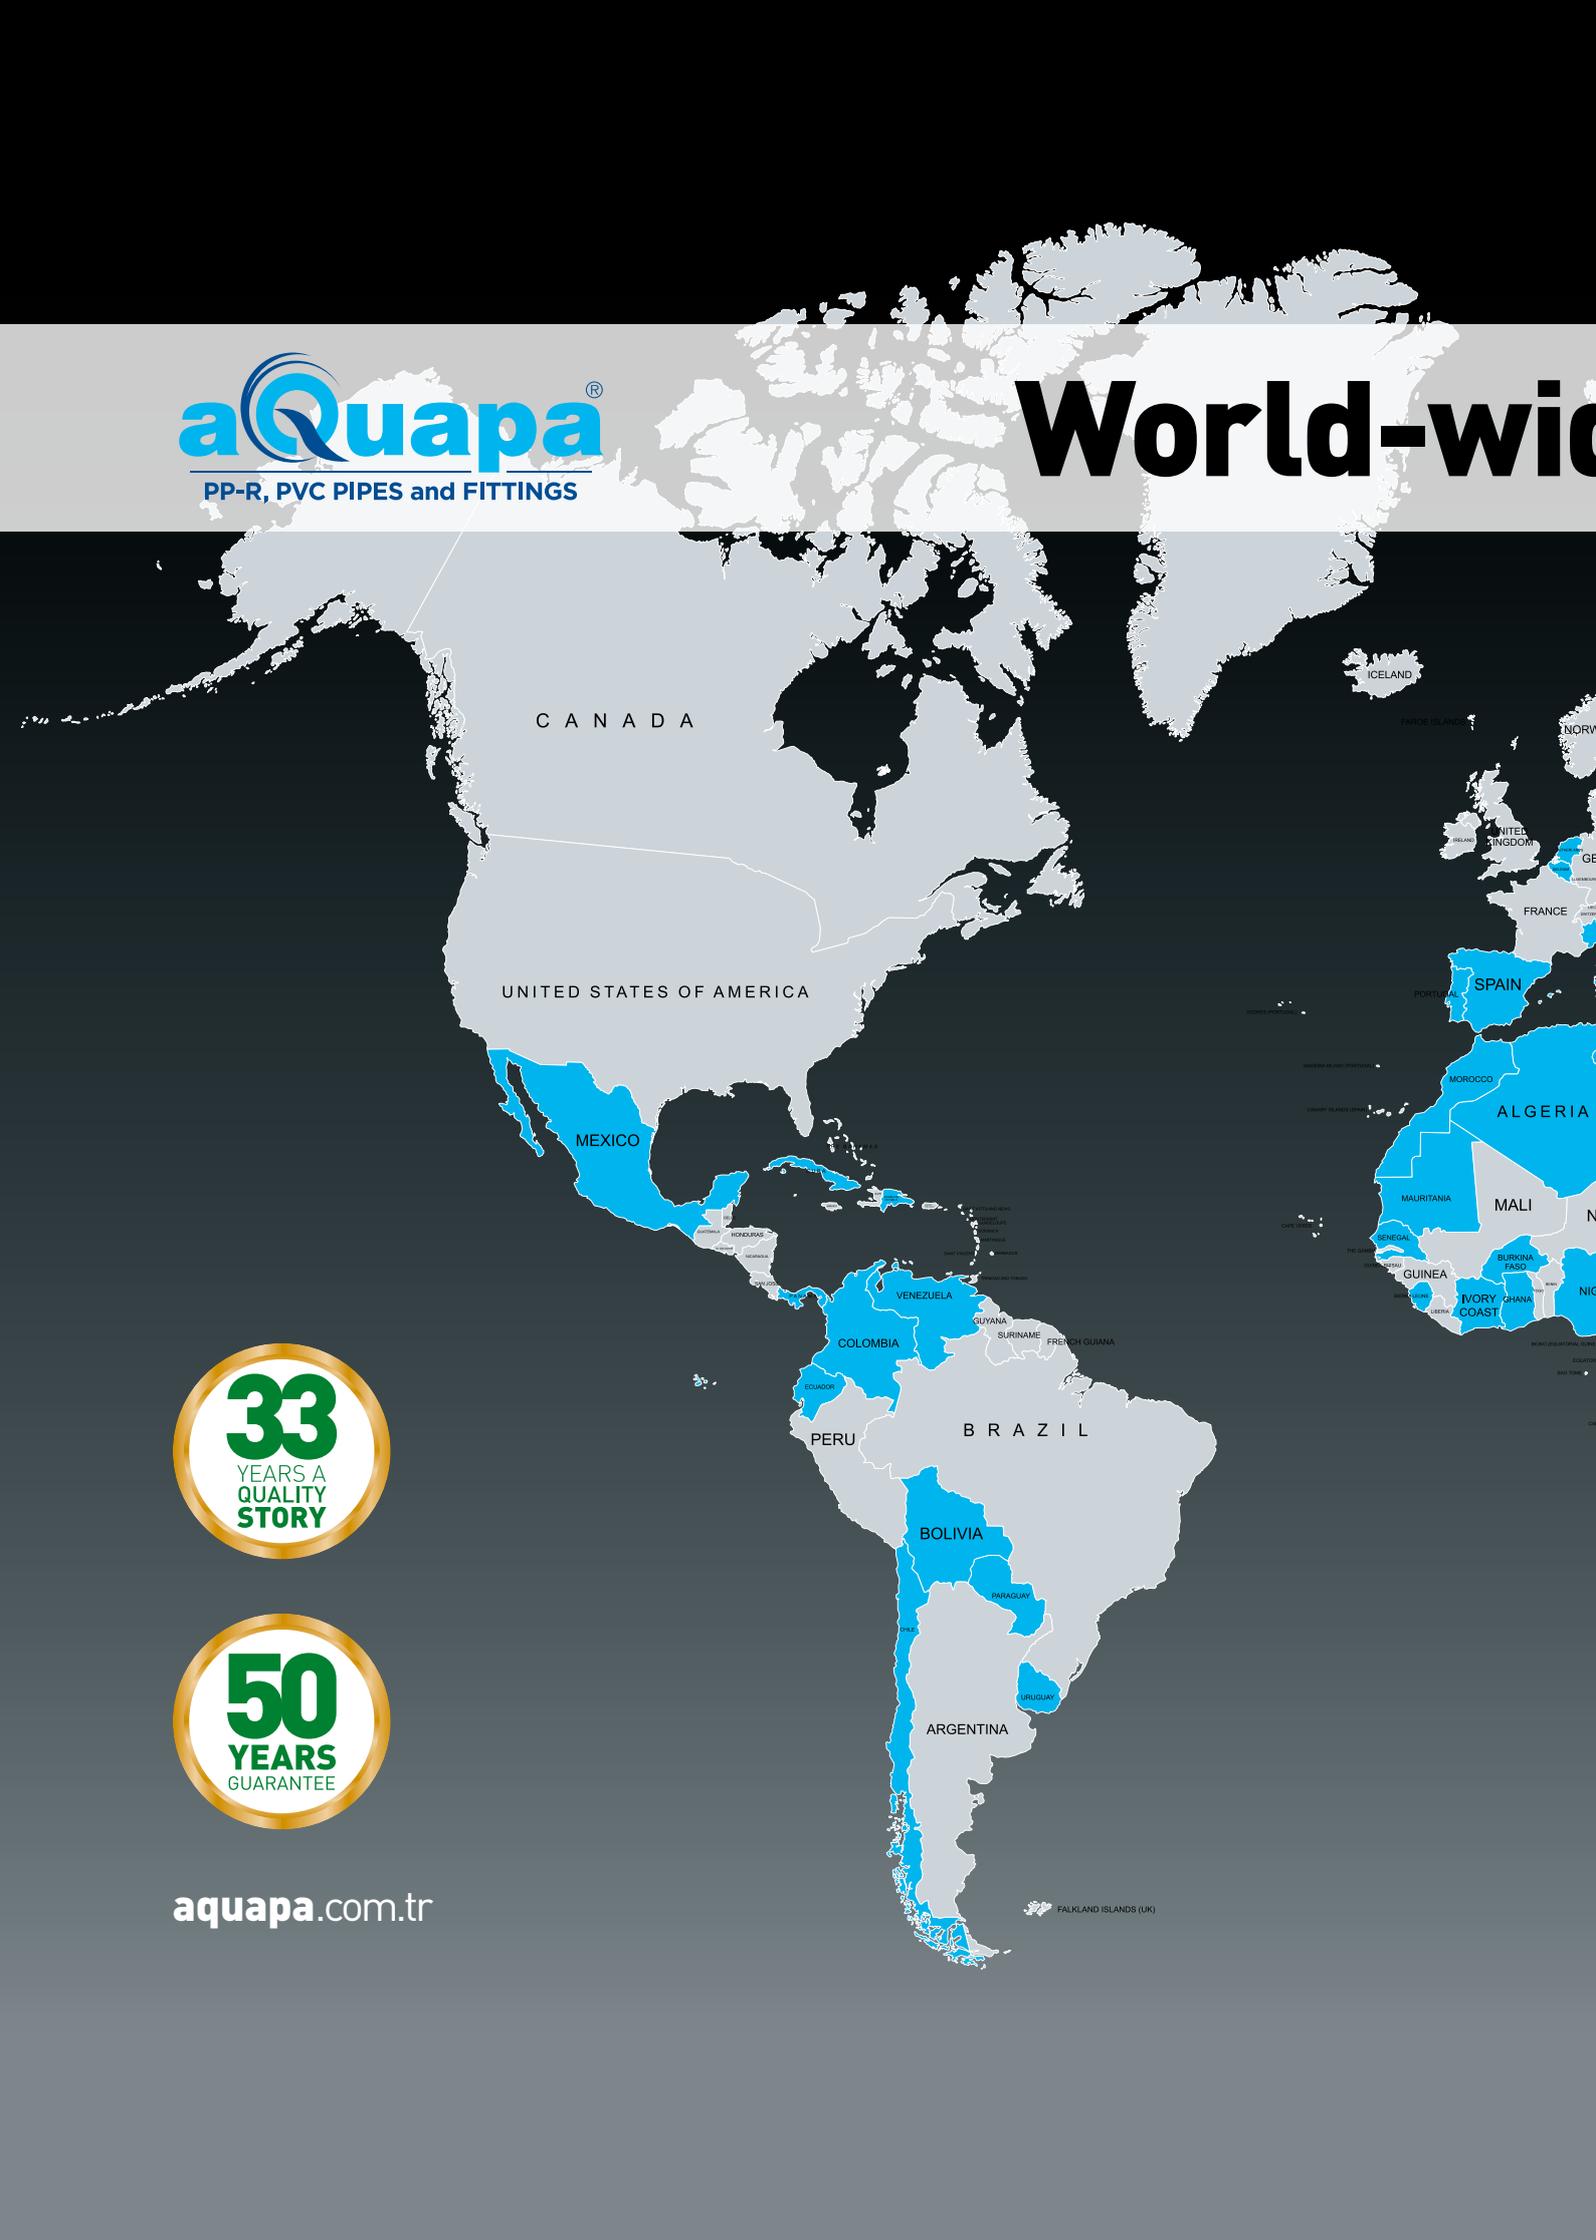

## Fields of Application

Formül PP-R pipes and fittings are commonly used for hot and cold water systems.

Formül PP-R pipes and fittings can be directly used drinking water systems, wall, floor and radiator heating systems, air conditioning systems and transferring any kind of liquid systems.

**TECHNICAL  
INFORMATION**

**1**

### Polypropylene Random Copolymer (PP-R)

Pipe and fittings are produced using PP Random Copolymer (PP-R). PP Random Copolymer is commonly used in drinking water installations, hot water, floor and radiator heating systems and every kind of industrial liquid distribution systems.

PP-R has a lot of advantages over other plastics such as; long life duration, high resistance to pressure and heat, better flexibility, high acoustic and thermal insulation, high molecular weight, low MFI.

PP-R confirms the requirements of ASTM F 2389, DIN 8077, DIN 8078, EN ISO 15874 standards.

### Technical Specifications

## Thermal Expansion in PP-R Pipes

PP-R pipes have an expansion coefficient that is much higher than the metal pipes. So, this characteristic should be taken into consideration during installations.

Calculation of thermal expansion is as follows:

$$\Delta L = L * \Delta T * \alpha$$

where

$\Delta T$  = The difference between environmental temperature and water temperature in Kelvin degrees (K) or Celsius (°C).

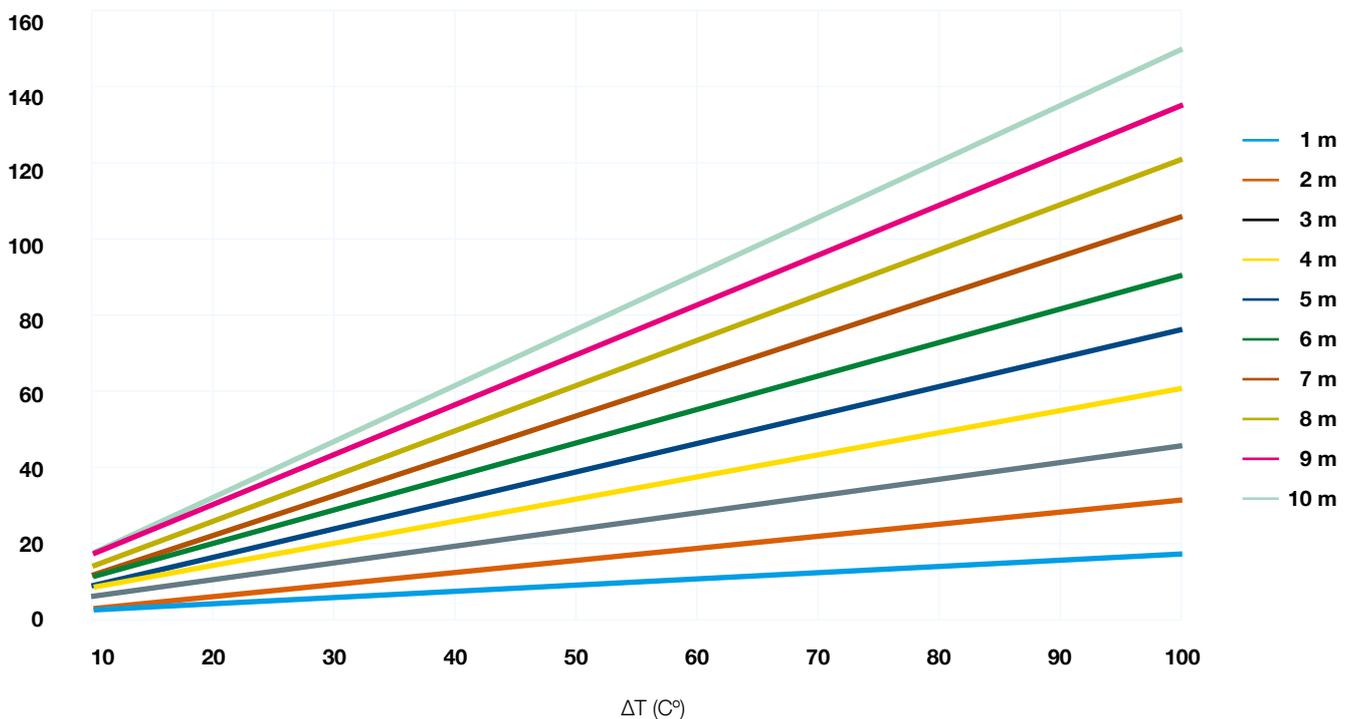

$\Delta L$  = Variation of length in mm.

L = Initial length of the pipe in m.

$\alpha$  = Coefficient of linear thermal expansion. The value of  $\alpha$  is  $1,5 * 10^{-4}$  (K-1) for PP-R pipes.

Pipe Length L ( m. )	Linear Expansion $\Delta L$ ( mm. )									
	Temperature Difference $\Delta L$ ( °C )									
	10	20	30	40	50	60	70	80	90	100
1	1.5	3	4.5	6	7.5	8	10.5	12	13.5	15
2	3	6	9	12	15	18	21	24	27	30
3	4.5	9	13.5	18	22.5	27	21..5	36	40.5	45
4	6	12	18	24	30	36	42	48	54	60
5	7	15	22.5	30	37.5	45	52.5	60	67.5	75
6	9	18	27	36	45	54	63	72	81	90
7	10.5	21	31.5	42	52.5	63	73.5	84	94.5	105
8	12.5	24	36	48	60	72	84	96	108	120
9	13.5	27	40	54	67.5	81	94.5	108	121.5	135
10	15	30	45	60	75	90	105	120	135	150

### Thermal Expansion of the Standart PP-R Pipe

Example; at 70 °C for 8m PP-R pipe,  $\Delta L=?$

$$\Delta L = L * \Delta T * \alpha$$

$$\Delta L=8000 \text{ mm} * 70 * 0,00015$$

$$\Delta L=84 \text{ mm}$$

## PP-R Glassfiber Reinforced Pipe

PP-R Glassfiber Reinforced Pipe (PP-R/GF/PP-R) consist of three layers where the inner and outer layers are produced of PP-R and the middle layer is produced of the special mixture of PP-R and Glassfiber raw material.

### Main Advantages of the PP-R Glassfiber Reinforced Pipe

- 1) Easier and faster installation since it does not require peeling before the welding operation.
- 2) It has 75 % less linear expansion than the standart PP-R pipe.
- 3) Higher stiffness than standart PP-R pipe.
- 4) Glassfiber PP-R pipes have thermal expansion co-efficient close to foil pipes, they can conveniently be used in the areas where foil pipes are used. Expansion co-efficient:  
 For Glassfiber Reinforced PP-R pipe: 0,035 mm/mK  
 For Aluminium Foil Reinforced PP-R Pipe: 0,030 mm/mK  
 For Standart PP-R Pipe: 0,15 mm/mK
- 5) Lighter than standart PP-R pipes.

#### Application Areas:

- 1) All kinds of hot and cold water installations.
- 2) Air pressure installations.
- 3) Heating installations and radiator connections.
- 4) Industry.

### Thermal Expansion in Glassfiber Reinforced PP-R pipe

Calculation of Glassfiber Reinforced PP-R pipe thermal expansion is as follows:

$$\Delta L = L * \Delta T * \beta$$

where

$\Delta T$  = The difference between environmental temperature and water temperature in Kelvin degrees (K) or Celsius (°C).

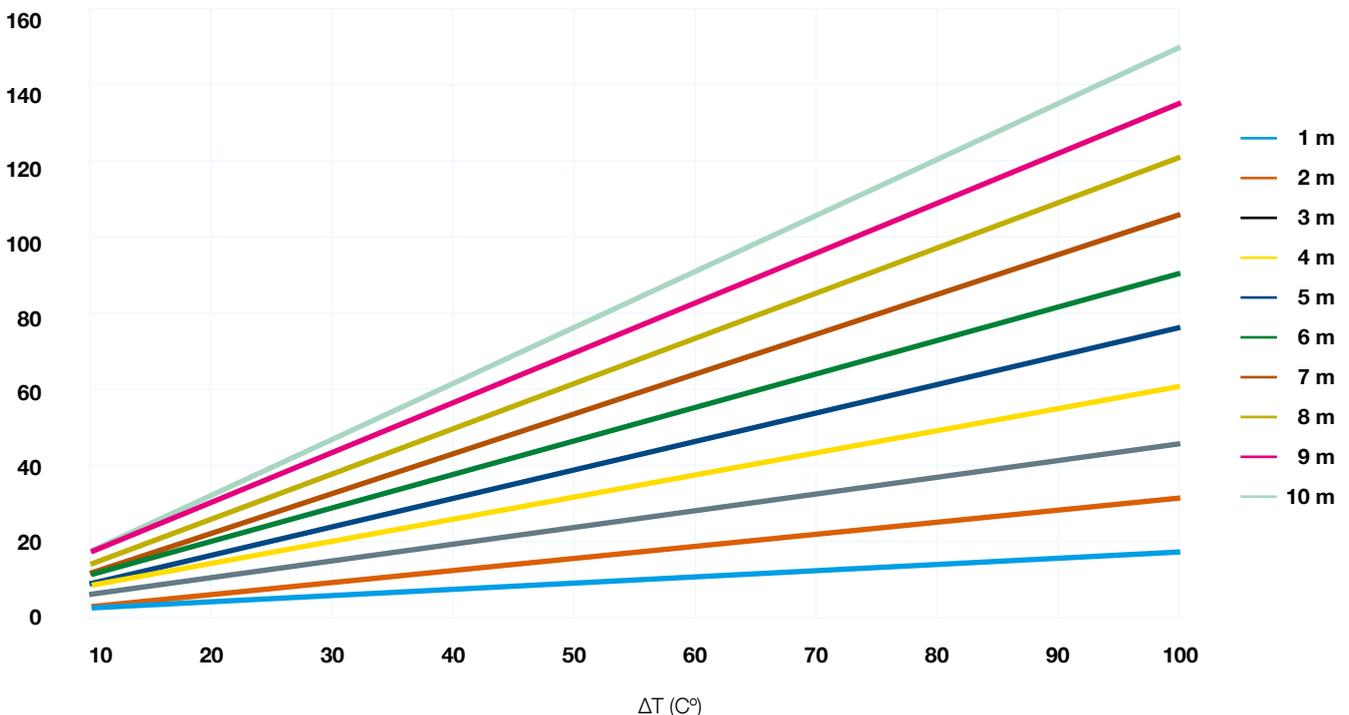

$\Delta L$  = Variation of length in mm.

L = Initial length of the pipe in m.

$\Delta T$  = The difference between environmental temperature and water temperature in Kelvin degrees (K) or Celsius (°C).

$\beta$  = Coefficient of linear thermal expansion. The value of  $\beta$  is  $0,35 * 10^{-4}$  (K-1) for Glassfiber Reinforced PP-R pipes.

### Thermal Expansion of the Glassfiber Reinforced PP-R Pipe

Example; at 70 °C for 8m Glassfiber Reinforced PP-R pipe,  $\Delta L=?$

$$\Delta L = L * \Delta T * \beta$$

$$\Delta L = 8000 \text{ mm} * 70 * 0,000035$$

$$\Delta L = 19,6 \text{ mm}$$

## PP-R Aluminium Foil Reinforced Pipe

This pipe consists of three layers: the pipe and the coat are made of PP-R with aluminium foil inbetween. The Aluminium foil is attached with wrapping welding and by using a special PP coating film to establish the mechanical connection between the aluminium foil and the PP-R layer.

### Characteristics

- Low thermal expansion
- Oxygen impermeability
- Low heat loss
- High resistance to pressure and heat
- Easy forming, installation and application
- Hygenic
- Resistance to chemicals
- Low pressure loss due to the smoothness

### Oxygen Impermeability

Oxygen penetration reduces the operating life by corroding the radiator and heater device. Oxygen diffusion from the atmospheric air is one of the most common ways of oxygen penetration into the system. Plastic pipes do not prevent this penetration. The aluminium layer increases the life of the radiator and the heater device by preventing.

### Thermal Expansion in Aluminium Foil Reinforced PP-R Pipe

Calculation of Aluminium Foil Reinforced PP-R pipe thermal expansion is as follows:

$$\Delta L = L * \Delta T * \Phi$$

where

$\Delta T$  = The difference between environmental temperature and water temperature in Kelvin degrees (K) or Celsius (°C).

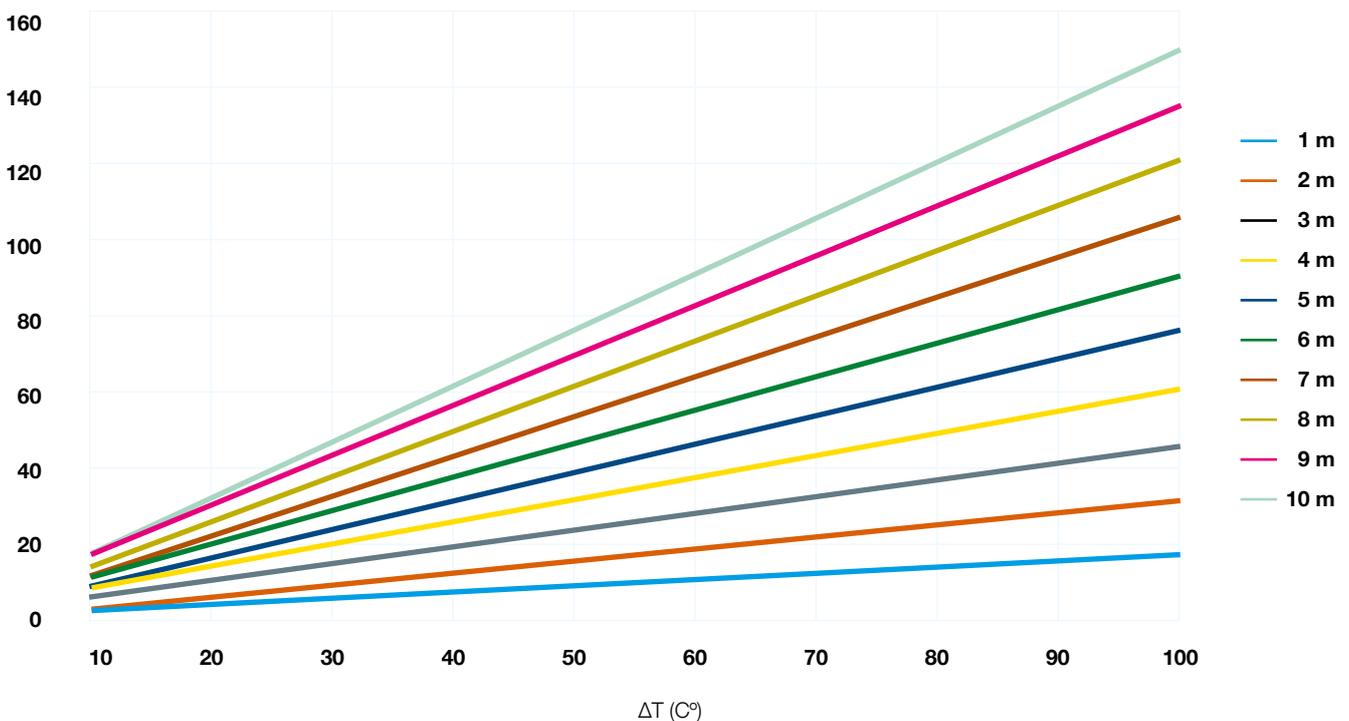

$\Delta L$  = Variation of length in mm.

L = Initial length of the pipe in m.

$\Delta T$  = The difference between environmental temperature and water temperature in Kelvin degrees (K) or Celsius (°C).

$\Phi$  = Coefficient of linear thermal expansion. The value of  $\Phi$  is  $0,30 * 10^{-4}$  (K-1) for Aluminium Foil Reinforced PP-R pipes.

### Thermal Expansion of the Aluminium Foil Reinforced PP-R Pipe

Example; at 70 °C for 8m Aluminium Foil Reinforced PP-R pipe,  $\Delta L=?$

$$\Delta L = L * \Delta T * \Phi$$

$$\Delta L = 8000 \text{ mm} * 70 * 0,000030$$

$$\Delta L = 16,8 \text{ mm}$$

## Expansion Comparison Among Standard Pipe, Glassfiber Pipe and Aluminium Foil Reinforced PP-R Pipe

As for seen from the examples above, at 70 °C for 8m of pipe expansion is;

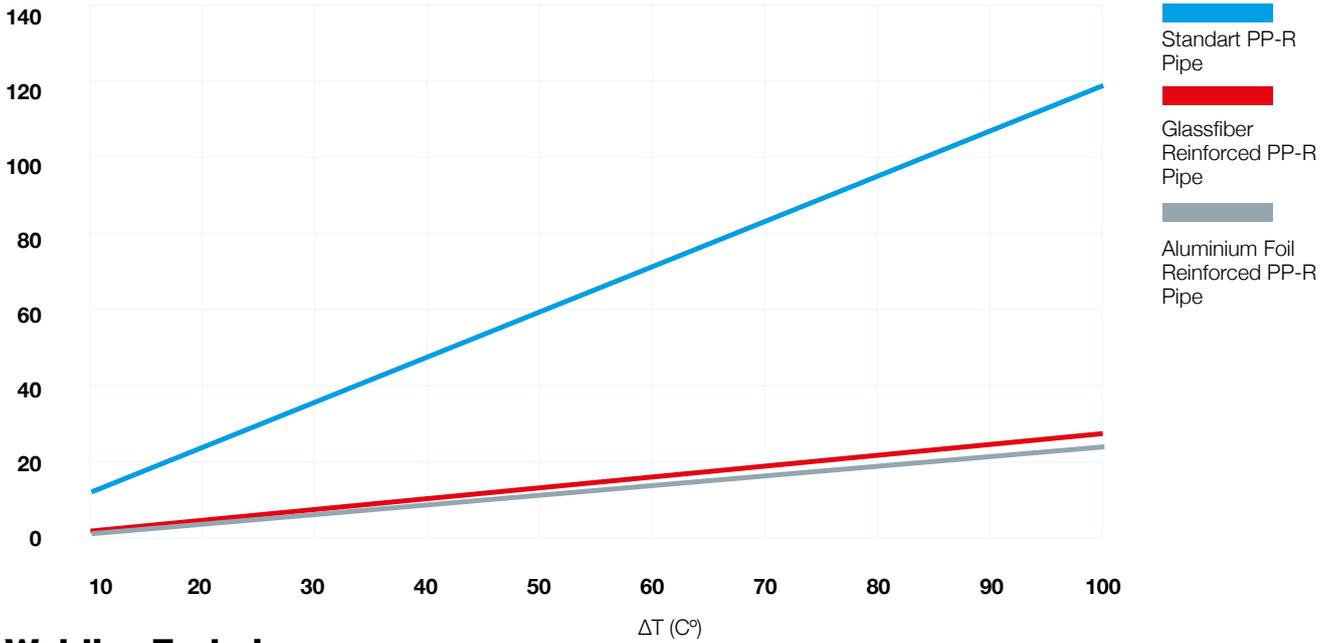

$\Delta L$  ( Standart PP-R Pipe) = 84 mm

$\Delta L$  ( Glassfiber Reinforced PP-R Pipe) = 19,6 mm

$\Delta L$  ( Aluminium Foil Reinforced PP-R Pipe) = 16,8 mm

In conclusion we can say Glassfiber and Aluminium Foil Reinforced PP-R pipes have very closer expansion values. Therefore Glassfiber Reinforced PP-R Pipe might be used easily instead of Aluminium Foil Reinforced PP-R pipe.

### Expansion Comparison Among Standard Pipe, Glassfiber Pipe and Aluminium Foil Reinforced PP-R Pipe

## Welding Technique

The quality of an installation depends on the tightness, stability and lifetime of its connections. Fusion welding technique is safe because parts made of polypropylene create a homogenous connection within the process. When the welded joint cools down, it can be fully loaded. The resulting joints are very reliable, and they are as strong as the pipe itself. The pipe may even break before the socket welded joint under tension.

Welding takes only a few seconds. After cutting the pipe perpendicularly to its axis, both the pipes and the fittings ( these must be clean if not please clean it with a cloth or alcohol-water solution) are heated with the welding machine ( generally up to 260 °C +/- 10 °C ) and they are joined without twisting. For proper connections please follow the table given below.

Outer Diameter (mm)	Heating Time (Secs)	Joining Time ( Secs)	Cooling Time (Minutes)	Welding Depth (mm)
20	5	4	2	14,5
25	7	4	3	16
32	8	6	4	18
40	12	6	4	20,5
50	18	6	5	23,5
63	24	8	6	27,5
75	30	8	8	31
90	40	8	8	35,5
110	50	10	8	41,5
125	60	10	8	46,5

## After Assembling Test Procedure

After assembling to start the test procedure system should be checked please see the steps below.

- Whole valves in the system must be turned off.
- While filling the system, first main valve is opened slightly.
- In order to avoid strong pressure impacts, pipe lines must be reduced air pressure from the utilization points at the highest and farthest sections.
- Separate tests are made by opening the valves of every zone.

When finishing the assembly of the installation, quality control of the system must be made by following below test procedure. Pressure testing shall be carried out in two stages.

**1)** For the first stage, a test pressure equal to the permissible working pressure plus 5 bar shall be produced twice within 30 minutes at 10 minute intervals. Then it shall be checked whether, over a further period of 30 minutes, the pressure has dropped by more than 0,6 bar and leakage has occurred.

**2)** The second stage shall follow the first stage without interval and shall last 2 hours. Then, it shall be checked whether the pressure has dropped by more than 0.2 bar and the pipework shows any signs of leakage.

Finally, If pressure drops more than the values given above in the manometer where test is observed, then leakage occurs. Leaking pipe line must be controlled and replaced or re-tightened.

## Installation and Expansion Compensation

Pipes can be installed under or above the floor. The installation is very easy and quick. However, one has to pay attention to the following simple points when installing polypropylene pipes.

Pipes have to discharge the radial and axial extensions; compensation may be done by using Omega and U parts. As an alternative, metal compensator also can be used instead of the omega and U parts.

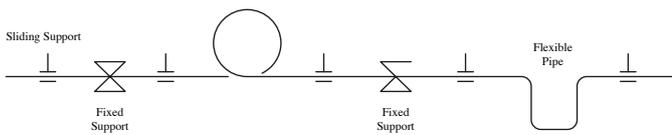

Figure 1- Omega and U part

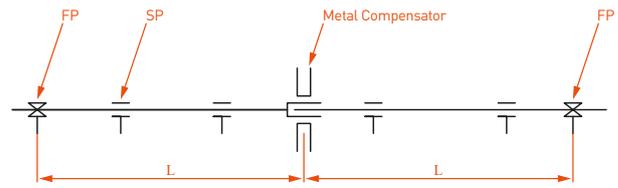

Figure 2- Metal Compensator

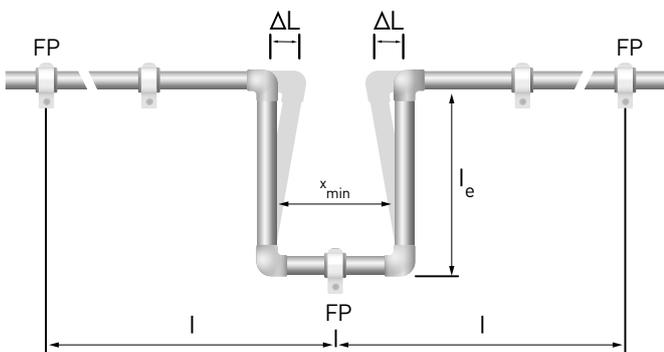

Figure 3-Distance of bending part

Length of the bending part is calculated by following equation.

$$Le = k * d * \Delta L$$

$Le$  = Length of the bending part ( U part, mm)

$d$  = Outside diameter of the pipe (mm)

$\Delta L$  = Variation of length (mm)

$k$  = Material dependent constant (15 for PP)

FP: Fixing point, support point, SP: Sliding point, support point.

## CLAMPS INTERFACES

**CHEMICAL RESISTANCE**

Polypropylene is a polymer with very high chemical resistance. Chemical resistance varies on factors such as composition, quality condition, time of affection, concentration and temperature. The tables shown below give chemical resistance in different temperature and concentrations.

The Symbols used in the table are:

S : Saturated solution

f : Resistant

p : Partially resistant

n : Nonresistant

Products	Concentration	Temperature		
	%	20 C°	60 C°	100 C°

Metal Insert Used For The Fittings Are BRASS MS 58  
Which Means

### Copper

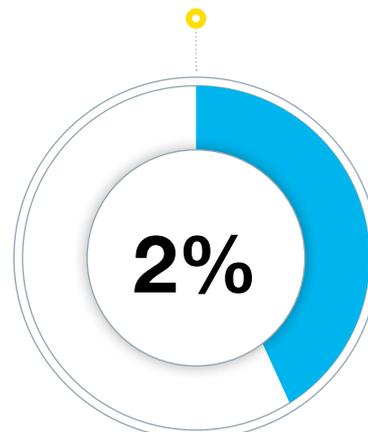

### Zinc

### Others

Pb, Sn, P, Mn, Fe, Ni, Si, Mg, Cr, Al, etc.

## PP-RCT PIPES

- Polypropylene Random Copolymer with improved temperature resistance and enhanced crystalline structure.
- Leads to more and smaller crystals compared to PP-R.
- Higher strength at higher temperatures.
- 25% less expansion in multilayer PP-RCT pipes compared to multilayer PP-R pipes.
- Safety and life-time longer which means lower costs.
- Higher pressure rates with lower thickness.
- 17% higher flow rate.
- 5 MPa at 70°C in comparison to 3,21 MPa for standard PP-R.
- More than 50% improved long-term strength enables designers to achieve higher pipe hydraulic capacity and higher pressure.
- Lightweight according to higher ID compared to PP-R.
- Provides resistance to highly acidic and basic solutions.
- Better mechanical characteristics than PP-R.

## Norms in Use

**TS-DIN 1988**

Drinking water line installation.

**TS-DIN 2999**

Whitworth pipe threads for tubes and Fittings.

**TS-DIN 4109**

Sound insulation in building construction.

**TS-DIN 8077**

Polypropylene (PP-R) pipes dimensions.

**TS-DIN 8078**

Polypropylene (PP-R) pipes general quality requirements and testing.

**TS-DIN 16928**

Pipe connections and components - Pipes of thermoplastic materials; pipe joints, elements for pipes, laying; general directions.

**TS-DIN 16962 (6-9)**

Pipe joints and elements for polypropylene (PP-R) pressure pipelines, types 1 and 2; injection moulded elbows for socket-

welding, dimension.

**TS-DIN 16962.5**

Pipe joints and components of polypropylene (PP-R) For pipes under pressure, Part 5: General quality requirements, testing.

**TS-DVS 2207.11**

Welding regulations for plastic pipes.

**TS-DVS 2208.1**

Machines and devices for welding thermoplastic pipes.

**TS-EN ISO 15874 -2-3**

Plastics piping systems for hot and cold water installations polypropylene (PP-R)

**TSE K 28**

Multi-layer glass Fiber pipes From Polypropylene (PP) - pressure pipes used for hot and cold water systems.

**TS 9937**

Plastic Pipes from Polypropylene (PP) - general purpose.

## Transport &amp; Storage

## Транспортировка и хранение

## النقل والتخزين

• Store the pipe and fittings sheltered from sun and rain. Do not expose the UV radiation for a long time.

• Хранить трубы и фитинги в защищенном от солнца и дождя месте. Не подвергайте УВ излучению в течении длительного времени.

• تخزين الأنابيب وملحقاتها بعيداً عن اشعة الشمس والمطر لا تعرضها للأشعة فوق البنفسجية لفترة طويلة

• Do not store at temperatures below 0°C. Impacts can form cracks on pipes.

• Не храните при температуре ниже 0°C. Есть вероятность образования трещин на трубах.

• لا تخزين في درجة حرارة اقل من 0 درجة مئوية التآثيرات: قد تسبب تشقق في الأنابيب

• Protect the impact of hard and sharp objects.

• Защищайте от воздействия твердых и острых предметов.

• الأجسام الحادة والصلهه قد تسبب التلف

• Although it is quite durable please do not throw of during loading and unloading.

• Не бросайте во время погрузки и разгрузки.

• الرجاء عدم رمي خلال التحميل والتفريغ

• Please move carefully and stacked.

• Передвигайте и складывайте осторожно.

• الرجاء نقل بعناية وترتيب

## PE-RT PIPE

PE-RT pipe (Polyethylene - Raised Temperature Resistance) is a shortened version of heat resistant PE pipe. PE-RT pipes are produced by our experienced and expert team in high quality machines in accordance with ISO 22391-2 standard.

### PE-RT Pipe Characteristic

- PE-RT pipes are produced from environmentally friendly recyclable thermoplastic materials, Type 2 PE-RT raw material.
- PE-RT pipes can be laid easily in cold weather without the need for heating thanks to its flexibility feature.
- PE-RT pipes are resistant to high heat and pressure due to specially developed raw materials and have high resistance against chemicals.
- PE-RT pipes can be used in drinking water.
- After the pipes are produced, they are packed in coils and easily transported.
- The outer diameter of the pipes is 16mm, and the wall thickness is 2mm.
- Red, Blue, two color sheaths, standard and oxygen barrier types are available.

### PE-RT Pipe Usage Areas

- Hot & cold clean water installations
- Central heating
- Underfloor heating
- Radiator connections and
- It is used in industrial applications.

### What is the difference between PE-RT pipe from other pipes?

Other types of pipes on the market lose their flexibility, especially in cold weather conditions. Heating devices are needed for the system to be laid. PE-RT pipes have a flexible structure due to their raw material structure and thus can be installed without the need for heating in cold weather.

PE-RT Type 2 raw material PE-RT pipes have long-term hydrostatic strength at high temperature without the need for cross-linking existing in PE-X pipes. Thanks to this feature, it is environmentally friendly and recyclable.

It is suitable for use in drinking water as it does not contain any chemicals that allow cross-linking, as in PE-X pipes. It is not harmful to human health.

Two types of plastic pipes are used in floor heating and radiator systems. One of them is PE-X (polyethylene cross-linked, PE cross-linked) and the other is PE-RT (polyethylene raised temperature resistance). Both PE-X and PE-RT pipes are made of polyethylene raw material. There are sub-types of PE-X pipes namely; PE-Xa, PE-Xb, PE-Xc. In PE-X pipes, the resistance of the pipe to heat and pressure increases from c to a. On the other hand, the flexibility properties of the pipes decrease. Pipes must be laid by heating in order to gain flexibility during application. This situation causes losses in time and labor. PE-RT pipes, on the other hand, have the highest flexibility feature thanks to the specially developed PE-RT Type 2 raw material in its structure, while maintaining the high temperature and pressure resistance properties of the pipe. Thus, PE-RT pipes can be laid cold without the need for heating. PE-RT pipes have a life span of at least 50 years when installed with the right material selection and correct assembly techniques.
